Sponsored by the Essex Technical High School Parent Teacher Student Organization

80% of
Massachusetts
youth believe that
marijuana is harmless.
(BSAS 2012)

Is it?

This presentation will focus on the health impacts of adolescent use of marijuana.

Learn about why teens choose to use marijuana, how it influences brain chemistry, new marijuana-based products, context and history behind today's trends in adolescent use, signs and symptoms that your teen may be using, and how to discuss this topic in a productive way with teens.

This is an informal discussion hour for adults interested in this topic.

Presented by Lea Forster, LMHC, Lahey Health Behavioral Services and Peg Sallade, Director, DanversCARES, Danvers Community Prevention Partnership.
